## TIP-ON for TANDEMBOX

### Easy Opening - Just touch the front

Handle-less fronts are playing a greater and greater role in modern furniture design. With TIP-ON for TANDEMBOX – the mechanical opening support system from Blum – handle-less drawers and pull-outs open with just a touch. This enables your customers to experience functional opening comfort in the kitchen, bathroom & living room.

### Reliable handle-less opening

With TIP-ON for TANDEM, a light touch on the front at any location is enough. Drawers can be stopped in any position when opening. Thanks to the optional synchronisation feature, TIP-ON can also be used with wide pull-outs.

### Secure closing

During the development of TIP-ON, we made sure that there was a secure latching function when closing: TANDEMBOX pull-outs close easily with a light swing or push. The mechanism holds them securely closed.

i

### Persuasive advantages

**No additional space requirement in the depth**  
Because all TIP-ON components are attached to the bottom of the drawer base, you do not need any additional space in the depth.

### Proven, simple assembly

Only a few steps are required for TIP-ON assembly. TANDEMBOX drawers and pull-outs can be assembled as normal.

### Tool-free depth adjustment

Depth adjustment is tool-free and the drawer does not have to be removed.

### Small programme, wide range of applications

You can use TIP-ON for all common TANDEMBOX applications: From standard cabinets to special solutions such as the Blum sink cabinet.
